

## **RAT TAIL ANGLE GRINDER WE 19-180 Quick RT**

**Handy power pack for the separation of roof tiles, stone slabs and metal: the new 180 millimetre rat tail angle grinder from Metabo**

The WE 19-180 Quick RT revolutionises the construction site: The new angle grinder offers with 60 millimetres the same cutting depth as a large 230 millimetre angle grinder at 1,900 watt power and half weight.

Cutting made easy – with less than three kilogrammes, Metabo presents with the new WE 19-180 Quick RT the lightest rat tail angle grinder on the market. Thanks to this, the new rat tail angle grinder is only half as heavy as a large 230 millimetre angle grinder, offers, however, the same cutting depth of 60 millimetres. Mainly roofers, carpenters and landscapers work with the light rat tail angle grinder in ergonomic design in a low-stress and precise manner, whilst being gentle on the back. Thanks to the slim handle area and the gear head that can be rotated at 90 degree steps, the angle grinder lies securely in the hand. The new powerful 1,900 watt Marathon-motor separates roof tiles, patio tiles or paving slabs in a powerful manner. Moreover, the improved carbon brush system of the motor doubles the service life. The proven Metabo S-automatic safety clutch automatically decouples the motor when the disc jams and thus protects the user from kickback. Thanks to the Metabo Quick System, users change their accessories quickly and without tools.

### **Cordless alternative**

Metabo offers the new WB 18 LTX BL 180 cordless angle grinder for renovation work and an ideal cordless alternative for cutting roof tiles prior to window installation. The 2.6 kilogramme lightweight angle grinder with a cutting depth of 60 millimetres is the perfect companion for carpenters and roofers, who frequently work far away from power outlets and require absolute flexibility.

### **Extensive accessories for all applications**

For roofers needing to cut roof tiles and glazed tiles precisely, Metabo recommends the UP-T diamond cutting discs. This turbo disc with its closed cutting edge for finer cuts prevents any chipping of the glaze. Landscapers, who cut patio tiles and paving slabs, use the segmented UP diamond cutting disc for faster work progress. The thin high-performance cutting disc "Flexirapid Super Inox HydroResist" is the best choice when it comes to the highest cutting out-put and precise cutting of steel and stainless steel. A semi-closed cutting blade guard protects the user from sparks and in the event that an abrasive grinding wheel breaks.

The gear head of the WE 19-180 Quick RT can be rotated at 90-degree intervals and fixed. Carpenters, roofers and landscapers guide the tool thus more comfortably and safely in all cutting applications.

In crafts and landscaping, professionals using the WE 19-180 Quick RT can cut 60 millimetre thick patio and paving slabs as well as roofing tiles with one cut. Therefore, the WE 19-180 Quick RT has the same cutting depth as a large 230 millimetre angle grinder, however, is only half as heavy.

Cordless alternative: The cordless angle grinder WB 18 LTX BL 180 from Metabo is the optimal companion for carpenters and roofers who require full power far away from a power outlet. The 2.6 kg light angle grinder provides a cutting depth of also 60 millimetres.
