

Combination Hammer KH 5-40

Simply powerful: New SDS-max combination hammer from Metabo in the 5 kilogramme class

- . Hammer drilling and chiselling with 8.5 joule single-impact energy. Motor potente de 1.100 watt
- . Powerful 1,100 Watt motor
- . Extensive accessories for different applications

The new SDS-max combination hammer from Metabo is an all-round solid machine.

The combination hammer KH 5-40 handles hammer drilling and chiselling with a maximum single-impact energy of 8.5 joule (according to EPTA). The hammer with powerful 1,100 Watt motor drills dowel holes in concrete, stone and masonry up to a maximum diameter of 40 millimetres. Even moderately difficult demolition and drilling applications are no problem with the KH 5-40. "A combination hammer like the KH 5-40 should be available on every construction site", says product manager Silke Bobe. "Such a hammer is used almost every day, especially in the renovation sector."

Robust, fast and safe

Whether drilling through rafters or masonry for the laying of electrical wires, efficient removal of plaster and tiles or light demolition work - electricians, tilers, masons or plumbers find the KH 5-40 to be a robust tool that handles drilling and chiselling applications with a maximum impact power of 400 Joule per second in a fast and efficient manner. The aluminum die-cast gear housing optimally dissipates heat and thus increases the service life of the machine. Also the topic of safety plays an important role for the SDS-max combination hammer: The Metabo S-automatic safety clutch protects the user from kickback, by mechanically decoupling the drive if the drill jams.

Extensive range of accessories for varied applications

Metabo offers craftsmen not only power tools, but complete system solutions for healthy and efficient working: The connection with the vacuum cleaner ASR 35 M ACP and the suction adapter DDE 72, for example, reduces the dust exposure when drilling in hard material to a minimum - this protects the tool and the user's health. For efficient work progress, Metabo offers an extensive range of accessories: from carbide-tipped hammer drill bits with two or four cutting edges to dust extraction drill bits and different chisels to carbide-tipped cutter and core bits - with this Metabo offers the right drill bit or chisel for any application.

Combination Hammer KH 5-40

Technical data

	KH 5-40
Max. single-impact energy (according to EPTA)	8.5 J
Maximum impact rate	2.800/min
Input power	1.100W
Max. drill diameter with hammer drill bits / core bits	40mm / 105mm
Bit retainer	SDS-max
Weight	7.1Kg
