Cutting, cleaning, maintaining: New cordless shrub and grass shears and cordless backpack sprayer from Metabo

- **One tool, two applications:** The shrub shears can be converted to grass shears with only one hand movement
- **Particularly powerful and precise topiary of shrubs and clean lawn edges**
- **Backpack sprayer without manual pumping:** Pesticide and plant boosters can be applied easily and uniformly

The new cordless shrub and grass shears from the Metabo garden range bring shape to hedges, bushes and lawn edges in a powerful and accurate manner.

Whether grass, hedge or tree – with the new garden tools from Metabo garden professionals can now carry out their most important tasks with the powerful battery packs from the Nürtingen power tool manufacturer. The new two-in-one cordless shrub and grass shears SGS 18 LTX Q with 18 Volt as well as PowerMaxx SGS 12 Q with 12 Volt ensure precise cuts and lawn edges. The 18 Volt cordless backpack sprayer RSG 18 LTX 15 with pesticide and plant boosters ensures radiant green - all this without manual pumping.

Perfectly shaped cuts

“Our new shrub and grass shears combine two applications in one tool and thus offer users maximum flexibility. At the same time they operate with power and precision”, says Carina Frank, product manager at Metabo. With the Metabo quick system, the respective blade attachments can be changed quickly and without tools using one hand only. Like this, the shrub shears simply become grass shears and vice versa. The tools weigh only 800 grams without battery pack, they have a particularly ergonomic design and their operation is quiet and trouble-free. Hedges, bushes and shrubs can be comfortably cut into shape using the shrub shears. The SGS 18 LTX Q and the PowerMaxx SGS 12 Q as grass shears ensure clean lawn edges. Using the telescopic handle available as accessory, users can work in a standing position that is gentle on the back. “With both shrub and grass shears users achieve absolutely precise cutting results. This is ensured by our high-quality laser-cut and diamond-ground blades with a cutting thickness of up to eight millimetres”, says Carina Frank.

Users can convert the shrub shears to grass shears thanks to the Metabo quick system.

The additional safety switch and the integrated blade quick stop make working particularly safe. “Thanks to our powerful battery packs, the shrub and grass shears have a long endurance. The SGS 18 LTX Q using a Li-ion battery pack with 2.0 Ampere hours capacity endures 150 minutes with the grass blade and 165 minutes with the shrub blade”, says Carina Frank.

The right care

In order for foliage to remain healthy, it requires protection and care. With the 18 Volt cordless backpack sprayer RSG 18 LTX 15, pesticides and plant boosters are sprayed absolutely uniform and without any manual pumping. The electronically controlled pump ensures particularly efficient and lasting working: Users can set the operating pressure infinitely and thus accurately dose the spray volume. In four hours up to 90 litres can be dispersed using only one battery pack. The brass nozzle permits the easy change between spray mist and jet. “Since the device is not too light with a full 15 litre tank, we attached great importance to the ergonomic design. The shape of the tank and the padded straps with click closure ensure high wearing comfort and positioning that is easy on the back”, explains Carina.

The shrub and grass shears and the backpack sprayer are three of seven new cordless tools with which Metabo is expanding its garden range this year. Other tools will follow over time. This does not only increase Metabo’s range, but also the cross-manufacturer battery pack system CAS (Cordless Alliance System) in which currently more than 230 machines from 23 brands are compatible with one battery pack.

Thanks to the telescopic handle, lawn edges can be cut comfortably while standing, thus sparing your back.

The 18 Volt cordless backpack sprayer RSG 18 LTX 15 applies pesticide and plant boosters in a specially uniform manner, completely without manual pumping.
