

SSEP 18 LTX BL MVT

Metabo introduces its most powerful cordless sabre saw to the market

- **Selectable pendulum stroke of a particularly fast sawing progress**
- **Reduced vibrations with Metabo VibraTech (MVT)**
- **Change the saw blade and adjust the depth guide without tools**

For very demanding applications, the new 18 Volt cordless sabre saw SSEP 18 LTX BL MVT from Metabo is the ideal tool: “Our new sabre saw is extremely powerful and the fastest on the market. Like this it masters even the most demanding applications without any problems”, says Maximilian Knauß, product manager at Metabo. This makes the tool ideally suited for demolition work and to cut different materials from wood and metal to stone to size. The pendulum stroke, which users can easily select by means of a lever, ensures particularly fast sawing progress. Thanks to this, the saw blade does not only move forwards and backwards, but also upwards and downwards. The Brushless motor delivers the required power. At the same time, the vibration compensation Metabo VibraTech (MVT) protects the user: An integrated counterweight minimises vibrations while sawing and thus permits comfortable working over longer periods of time.

The new 18 Volt cordless sabre saw SSEP 18 LTX BL MVT from Metabo is extremely powerful and the fastest on the market. This makes it the ideal tool for very demanding applications.

Tool-free change

The new cordless sabre saw also scores in terms of speed between the cuts: Users can change the saw blade by means of a lever on the housing. The lever can be operated conveniently in any position and even with gloves. The depth guide can also be adjusted without tools so that the saw blade can be optimally used. The speed selection ensures the best possible sawing performance in any material. “Furthermore, we have optimised the handle of our new sabre saw and positioned it at an angle. Like this the machine always fits well in the hand in different working positions”, explains Knauß. A robust aluminium housing protects the saw even in rough surroundings. The saw can be easily suspended from the integrated scaffolding hook and easily stowed away during work breaks.

SSEP 18 LTX BL MVT

Metabo introduces its most powerful cordless sabre saw to the market

The new cordless sabre saw is part of Metabo's 18 volt system, and adds another tool to the cross-manufacturer alliance CAS (Cordless Alliance System) for batteries. Within CAS, currently more than 300 machines from more than 30 different manufacturers are compatible with one battery pack and can be combined at will.

Technical data

	SSEP 18 LTX BL MVT
Battery pack voltage	18 V
Strokes in idle	0 – 3,000/min
Saw blade stroke	32 mm
Weight (without battery pack)	3.9 kg

The selectable pendulum stroke of the new Metabo 18 Volt cordless sabre saw SSEP 18 LTX BL MVT ensures a particularly fast sawing progress even for very demanding applications.

From wood to metal: The most powerful cordless sabre saw SSEP 18 LTX BL MVT from Metabo also saws mixed materials with efficiency and is therefore ideal even for demanding demolition work.

The saw blade of the new Metabo cordless sabre saw SSEP 18 LTX BL MVT can be changed by the user quickly and without the need for tools. The speed selection ensures the best possible sawing performance in any material.
