

## **Technomig 260 Dual Synergic: even more power in the world of Technomig Dual Synergic**

In the wake of the great success of the Technomig Dual Synergic range, Telwin presents model 260. Technomig 260 Dual Synergic is a 250A process inverter welding machine (MIG-MAG / FLUX / BRAZING / MMA / TIG-Lift), which is powerful and with intuitive use thanks to One Touch technology.

Flexible to use, Technomig 260 Dual Synergic can work on various thicknesses and welded and brazed materials, confirming it is an ideal tool for use in many application fields, from maintenance to structural steelwork and body shop work.

### **MORE PRODUCTIVITY WITH ONE TOUCH TECHNOLOGY**

Adjustment of Technomig 260 Dual Synergic is simple and immediate: simply set the thickness of the material and start welding. The 25 synergistic curves prepared for the various gases and materials allow quality welding to be achieved on steel, stainless steel, aluminium and on galvanised sheet metal without pointless time wasting during machine setting.

# Technomig 260 Dual Synergic: even more power in the world of Technomig Dual Synergic

## MORE QUALITY WITH ADVANCED SETTINGS

Programs dedicated to welding thin surfaces (ATC).

Possibility of manual intervention on the arc length to modify the shape of the welding seam based on the operator's style and preferences.

Adjustment of various advanced settings, such as the wire up slope, electronic reactance, the final burning time of the wire (Burn back), the post gas time and selection of 2/4 time and spot operation.

## MORE CONTROL WITH PARAMETERS ALWAYS HIGHLIGHTED

The LCD screen allows you to always have the voltage, current and welding speed parameters under control, thereby always having your work progress under control.

## MORE FLEXIBLE USE

Compact and easy to transport in any workplace, Technomig 260 Dual Synergic welds in MIG-MAG/ FLUX but, thanks to the specific, optional accessories, it can be used for electrode and TIG-Lift processes, since it is suitable for every type of work.
