

1.200 WATT ALL-PURPOSE VACUUM CLEANER RANGE

For maximum cleanliness and occupational safety: The new compact all-purpose vacuum cleaners from Metabo

- **Light and compact wet and dry vacuum cleaners**
- **Wide range in L, M & H dust classes**
- **Filter cleaning PressClean**

The Metabo all-purpose vacuum cleaner family is growing: Metabo offers five new tools of L, M and H dust classes. The mains-powered vacuum cleaners in the 1,200 Watt class tackle cleaning and vacuuming jobs on construction sites and in workshops quickly and reliably. They remove both fine and coarse dust and small amounts of water. The dust class L models are ideal for vacuuming hazardous dusts such as domestic dust, soil and chalk.

The ASA M 30 PC vacuum cleaner with dust class M is suited for work where dust hazardous to health are generated such as when processing concrete, wood or paint. A vacuum cleaner in dust class H is also part of the new range: “Professional users who work with carcinogenic materials such as beech dust, fibre material or lead, are ideally protected with our ASA 30 H PC. The scope of delivery contains a special H-class filter bag. Hazardous substances can be disposed of in a safe and clean manner”, explains Metabo product manager Albert Werner and adds: “Our new wet and dry vacuum cleaner range is the widest in its price segment. We have the right light and compact vacuum cleaner for any application. “ Furthermore: “All vacuum cleaners are certified according to EU standard.”

Cleanliness for indoors and outdoors

All new wet and dry vacuum cleaners have an integrated PressClean filter cleaning: When the suction power decreases, the users can clean the filter by pressing the PressClean button and thus increase the working time. Instead of the usual paper filter bags, Metabo uses fleece filter bags. They are significantly more robust and durable and even fine dusts can be caught safely and disposed of easily.

Metabo expands its all-purpose vacuum cleaner range with five new all-purpose vacuum cleaners in dust classes L, M and H. Photo: Metabo

Clean thing: All wet and dry vacuum cleaners have the integrated PressClean filter cleaning. If the filter gets clogged with dust after longer periods of working, it can be easily cleaned at the touch of a button. The power socket with automatic start/shut-down ensures that the vacuum cleaner switches on automatically after the power tool connected to it is switched on and dust and chips immediately disappear in the suction hose after they appear. For maximum cleanliness and occupational safety: The new compact all-purpose vacuum cleaners from Metabo

The ASA models have a power socket with automatic start/shut-down. If a power tool is connected directly to the power socket, the vacuum cleaner starts and stops automatically when the power tool is actuated. When using a cordless tool, the CordlessControl System that is available separately, takes over automatic start/shut-down of the vacuum cleaner.

Always at your side

The new Metabo vacuum cleaners are light, compact and handy to transport. The cable and hose holders on all models minimise tripping hazards on the construction site. With the ASA models there is also an accessory storage for cables, hoses and nozzles.

Even coupling to the Metabo metaBoxes is possible. This permits craftsmen to transport the tools and vacuum cleaner with one hand. Also practical: The supplied vacuum cleaner accessory with “Quick” system accelerates retrofitting, for example replacing different sleeves.

Technical data at a glance

	AS 20 L PC	ASA 20 L PC	ASA 30 L PC	ASA 30 M PC	ASA 30 H PC
Output	1.200 V	1.200 V	1.200 V	1.200 V	1.200 V
Air output max.	4.200 l/min	4.200 l/min	4.200 l/min	4.200 l/min	4.200 l/min
Vacuum	225 mbar	225 mbar	225 mbar	225 mbar	225 mbar
