

## CORDLESS ANGLE GRINDERS 1,500 - 900 - 700W

Three times best in class: The new cordless angle grinders from Metabo

- **1,500, 900, and 700 Watt: New cordless angle grinders in three different performance classes**
- **1,500 Watt series: the most compact and powerful 18 Volt angle grinders with unrivalled safety features**
- **The right angle grinder for any application**

The Nürtingen power tool manufacturer Metabo expands its extensive range of angle grinders and brings a number of new cordless angle grinders in three different performance classes to the market: the 1,500, 900 and 700 Watt series. “The angle grinder of the new 1,500 Watt class are the most compact and powerful 18 Volt cordless angle grinders in the world. We are setting completely new standards”, says Metabo product manager Herbert Schmid. “However, even the new machines of the 900 and 700 Watt series are each the most powerful ones in their performance class. We have already added a powerful, brushless machine to the existing 900 Watt class and introduced the new 700 Watt class.

The machines are ideal for all types of cutting jobs, from tiles to threaded rods. This is of particular interest to people in the building trade. Just like for the mains-powered machines, we offer now the right cordless angle grinder for any professional user. In the future, there will be 27 different cordless angle grinder models in five performance classes at Metabo. This includes the 2,400, 1,500, 1,100, 900, and 700 Watt series”, explains Schmid. We have adjusted the designations so that users can easily find the right angle grinder for them. Therefore, users can see the performance class and how much power the tool has directly from the type designation of the grinders. For example, the WB 18 LTX BL 15-125 Quick carries the number 15 for 1,500 Watt. The machines are thus as powerful as a mains-powered 1,500 Watt angle grinder.”

### Powerful and safe

The new cordless angle grinders of the 1,500 Watt class are one step ahead in many ways. For example, they permit greatest productivity with their brushless motors, handle overload and are the most compact machines in their class at the same time. This makes them the ideal machines especially for demanding, power-intensive applications in the metal industry - for example for maintenance work, in special vehicle construction or on shipyards. The angle grinders also impress with the highest level of user safety and are equipped with numerous safety functions. These included the electronic brake. It completely brakes the disc in less than one and a half seconds.

All angle grinders also come with the proven Metabo S-automatic safety clutch. In combination with the electronic safety shutdown, it reduces kickback when the disc jams to the lowest level on the market. Furthermore, all deadman switches of the range are equipped with a feature to which the Drop Security System (DS) from Metabo can be attached to protection machine and battery pack when working at great heights. Depending on the model, the integrated Auto-balancer together with the Metabo VibraTech handle (MVT) ensures for significantly less vibrations. This permits users to work longer and with extra safety.

The cordless angle grinders also impress with optimal handling and ergonomics: With the Metabo M-quick function, discs can be changed quickly and without any tools. Thanks to the rotating battery pack base, users enjoy maximum flexibility. In narrow or difficult positions the battery pack base can be rotated into the right position.

For different applications and customer requirements there are also the matching accessories for the angle grinders.

### Powerful and compact

The new cordless angle grinder of the 900 Watt class with brushless motors and also the 700 Watt machines each impress with the highest performance in their class. Whether roofers, HVAC companies or electricians, the new machines are ideally suited for all types of cutting applications on construction sites and during renovation. With their narrow handle circumference, they are particularly compact. The low weight also spares effort during every application. For different applications and customer requirements there are also the matching accessories for the angle grinders. All in all, the Metabo cordless angle grinders are just the right choice when it comes to highest user safety, compactness and maximum performance.

The new angle grinders complement the cross-manufacturer battery pack system CAS (Cordless Alliance System). Under CAS, currently more than 300 machine from more than 30 different manufacturers are compatible with one battery pack and one charger and can be combined in any configuration.

### An overview of Metabo cordless angle grinders:

	Model	Performance equivalent to mains-powered tools
7 series - the newcomers		
New	W 18 7-115	700 Watt
New	W 18 7-125	700 Watt
9 series - the flexible ones		
	W 18 L 9-115	900 Watt
	W 18 L 9-125	900 Watt
	W 18 L 9-125 Quick	900 Watt
New	W 18 L BL 9-115	900 Watt
New	W 18 L BL 9-125	900 Watt
11 series - the all-rounders		
	W 18 LT BL 11-125	1.100 Watt
	WB 18 LT BL 11-125 Quick	1.100 Watt
	WVB 18 LT BL 11-115 Quick	1.100 Watt
	WVB 18 LT BL 11-125 Quick	1.100 Watt
	WVB 18 LT BL 11-125 Quick INOX	1.100 Watt
	WPB 18 LT BL 11-125 Quick	1.100 Watt
15 series - the power packs		
New	WB 18 LTX BL 15-125 Quick	1.500 Watt
New	WB 18 LTX BL 15-150 Quick	1.500 Watt
New	WB 18 LTX BL 15-180 Quick	1.500 Watt
New	WVB 18 LTX BL 15-125 Quick	1.500 Watt
New	WVB 18 LTX BL 15-150 Quick	1.500 Watt
New	WBPA 18 LTX BL 15-125 Quick DS	1.500 Watt
New	WBPA 18 LTX BL 15-150 Quick DS	1.500 Watt
New	WBPA 18 LTX BL 15-180 Quick DS	1.500 Watt
24 series - the most powerful ones		
	WBP 36-18 LTX BL 24-230 Quick	2.400 Watt
